COLOR

2022

**JETSET**

Belgard's Color of the Year

Jetset is an energizing hue, full of optimism and the promise of a glorious day.

Keep the surrounding space in mind when choosing hardscape colors. Monochromatic and neutral tones can create a sleek, contemporary look. Whereas, contrasting hues work well for creating intricate eye-catching designs. Accessorize with our color of the year to complete your space.

2020

**TERRARIUM**

2021

**MARIGOLD**

Our previous colors of the year will still be seen in this year's accessory color palette. For a more subdued look, pull from the soft greens of 2020. For an energized feel, sprinkle in pops of Marigold.

TEXTURE

Texture plays an integral role in outdoor living design. The textures chosen can add a dimensional aspect, a time-worn aesthetic or an element of sophistication.

SCALE

Depending on the design goals, the shape and size of a paver can help make an outdoor space look more cozy, more open and contemporary, or more in harmony with the surrounding environment.

ARTISAN FINISHES

PREMIUM FINISHES TO MAKE YOUR SPACE TRULY YOUR OWN

Belgard offers three post-process finishes to create a one-of-a-kind look. Make new hardscapes look time-worn or uncover colors hidden beneath the surface to open up a new level of design functionality.

NOTE: For paving slab applications, some contractors prefer to pre-compact screeded bedding sand with a small plate compactor. If pre-compaction is done, care must be taken to leave no indentations in the bedding sand surface from the plate compactor. These can be removed by screeding the surface to create a thin layer (6 – 10mm) of uncompacted sand (also known as fluffing). Paving slabs do not interlock and therefore do not spread loads to their neighbors via joint sand. Given this condition, there is no requirement to force bedding sand into the bottom of the joints when compacting the units on uncompacted bedding sand, as is done with interlocking concrete pavers. Compacting large slab units could lead to unnecessary breakage, so many times contractors may choose to use a mallet to tamp the slabs into place once laid. Slabs do not meet the standard compressive and flexural strengths of interlocking concrete pavers, therefore, Belgard® will not be responsible for breakage to slabs caused by compaction.
